

# *Creation Manifesto*

*Brazilian Student Society for Aerospace R&D*

*22 April 2020*

Free (Libre) and Open Source philosophy are better for developing quality software. Having freedom in information and research is the best and righteous way to make science.

The participation of the community on science and engineering leads to the growth of the thrust between academia and the general public, as it addresses both needs more closely. This participation can be achieved with democratic and public spaces where freedom of equipment, resources, and knowledge can be found.

The development of the aerospace field leads to a better understanding of the Earth and the universe, improving society with the outcome technology and knowledge. The results should focus on empowering the community.

*“Show me the code, show me the data, and let’s make it.”*
